Enterprise Knowledge Agent

Problem Statement:

Enterprises today manage ****large and diverse sets of unstructured documents****—such as policies, Standard Operating Procedures (SOPs), contracts, compliance manuals, and audit reports.

Business users often need ****accurate, explainable answers**** that require reasoning across multiple documents rather than simple keyword-based retrieval.

Most traditional Retrieval-Augmented Generation (RAG) chatbots are limited in the following ways:

- They respond ****reactively**** without planning multi-step reasoning.

- They lack ****specialized roles**** (for retrieval, reasoning, validation, and memory).

- They provide little visibility into ****how or why**** an answer was generated.

This creates a gap between what enterprises need and what basic LLM-powered systems can deliver.

Technologies Used

Component	Technology / Framework	Purpose
Python	Core programming language	Implements multi-agent logic and local workflow
Streamlit	Web app framework	Interactive UI for enterprise Q&A
FAISS	Vector database	Local semantic search and document indexing
LangChain	AI orchestration library	Agent coordination, retrieval, and reasoning
OpenAI API	LLM integration	GPT-4o-mini reasoning and synthesis
Python-dotenv	Environment management	Loads API keys and configuration variables
PyMuPDF / PyPDF	PDF parsing	Extracts text from enterprise policy documents
LangChain-OpenAI	Connector	Embedding and chat model integration
LangChain-Community	Extensions	PDF loaders and FAISS integration

LangChain-Text-Splitters	Document chunking	Splits large PDFs for retrieval efficiency

Architecture Context

These technologies support a **multi-agent pipeline** consisting of:

- **Memory Agent** – maintains conversational context
- **Planning Agent** – creates reasoning plans
- **Retriever Agent** – performs document search (vectorstore or keyword)
- **Analyst Agent** – synthesizes grounded answers
- **Verifier Agent** – validates evidence and confidence

System Overview
Vectorstore active
• Source documents: loaded from the real PDF folder under Cognizant-Assignment/documents
• Retrieval: PDF content is indexed for semantic matching and keyword expansion when the vectorstore is available
• Analyst: LLM-grounded synthesis over retrieved evidence when available
• Verifier: checks whether the answer stays tied to the source material
• Memory: keeps recent evidence across turns

Multi-agent reasoning, grounded retrieval, validation, and explainability for enterprise knowledge questions.
What is the purpose of Compensation and Human Capital Committee ?
The purpose of the Compensation and Human Capital Committee is to assist the Board of Directors in the discharge of its responsibilities relating to the compensation of the Company's executive officers and the oversight of the Company's talent engagement and inclusion programs.
This includes responsibilities such as the evaluation and compensation of the CEO and other executive officers, making director compensation recommendations, and overseeing the Company's talent engagement and inclusion programs.
